## Solution Architecture Overview:

The solution architecture defines the structural and behavioural foundation of **House Hunt**, bridging the gap between user experience challenges and scalable technology solutions. It establishes core components that support seamless rental discovery, property management, and digital transaction workflows

## Key Objectives :

Identify tech infrastructure to solve renter-owner interaction barriers

- Outline platform layers including frontend, backend, database, and APIs

- Clarify system behaviours, performance expectations, and integration points

- Enable feature delivery in modular, agile development cycles

- Ensure transparency and security in rental transactions and data handling

## Example - Solution Architecture Diagram:
